CODING CHALLENGE

ORDER MANAGEMENT SYSTEM

Problem Statement:

Create SQL Schema from the product and user class, use the class attributes for table column names.

1.Create a base class called Product with the following attributes:

- productId (int)

- productName (String)

- description (String)

- price (double)

- quantityInStock (int)

- type (String) [Electronics/Clothing]

2. Implement constructors, getters, and setters for the Product class.

3. Create a subclass Electronics that inherits from Product. Add attributes specific to electronics products, such as:

- brand (String)

- warrantyPeriod (int)

4. Create a subclass Clothing that also inherits from Product. Add attributes specific to clothing products, such as:

- size (String)

- color (String)

5. Create a User class with attributes:

- userId (int)

• username (String)

 • password (String)

• role (String) // "Admin" or "User"

6. Define an interface/abstract class named
IOrderManagementRepository with methods for:

 • createOrder(User user, list of products): check the user as already
present in database to create order or create user (store in database)
and create order.

 • cancelOrder(int userId, int orderId): check the userid and orderId
already present in database and cancel the order. if any userId or
orderId not present in database throw exception corresponding
UserNotFound or OrderNotFound exception

• createProduct(User user, Product product): check the admin user as
already present in database and create product and store in
database.

• createUser(User user): create user and store in database for further
development.

• getAllProducts(): return all product list from the database.

• getOrderByUser(User user): return all product ordered by specific
user from database.

7. Implement the IOrderManagementRepository
interface/abstractclass in a class called OrderProcessor. This class will
be responsible for managing orders.

8. Create DBUtil class and add the following method.

• static getDBConn():Connection Establish a connection to the
database and return database Connection

9. Create OrderManagement main class and perform following operation:

• main method to simulate the loan management system. Allow the user to interact with the system by entering choice from menu such as "createUser", "createProduct", "cancelOrder", "getAllProducts", "getOrderbyUser", "exit".

OUTPUT SCREENSHOTS

1 CREATE USER:

```
--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 1
Enter User ID: 1
Enter Username: Raj
Enter Password: 123
Enter Role (Admin/User): User
MySQL database connection established.
 User created successfully: User[ID=1, Username=Raj, Role=User]

--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 1
Enter User ID: 2
Enter Username: Ram
Enter Password: 456
Enter Role (Admin/User): Admin
MySQL database connection established.
 User created successfully: User[ID=2, Username=Ram, Role=Admin]
```

2.CREATING PRODUCTS:

```
--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 2
Enter User ID: 2
Enter Username: Ram
Enter Password: 456
Enter Role (Admin/User): Admin
Enter Product ID: 11
Enter Product Name: Shirt
Enter Description: Pure Cotton Shirt
Enter Price: 2000
Enter Quantity in Stock: 156
Enter Product Type (Electronics/Clothing): Clothing
Enter Size: 36
Enter Color: Blue
MySQL database connection established.
 Product inserted successfully.
```

3.CREATING ORDERS:

```
--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 3
Enter User ID: 1
Enter Username: Raj
Enter Password: 123
Enter Role (Admin/User): User
Enter Product IDs (comma-separated): 11
MySQL database connection established.
Order created for user Raj with Order ID: 3
```

4.GET ALL PRODUCTS:

```
--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 5
MySQL database connection established.
(11, 'Shirt', 'Pure Cotton Shirt', 2000.0, 156, 'Clothing', None, None, '36', 'Blue')
```

5.GET ORDER BY USER:

```
--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 6
Enter User ID: 1
Enter Username: Raj
Enter Password: 123
Enter Role: User
MySQL database connection established.
(3, 11, 'Shirt', 'Pure Cotton Shirt', 2000.0, 'Clothing')
```

6.CANCEL ORDER:

```
--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 4
Enter User ID: 1
Enter Order ID: 3
MySQL database connection established.
Order 3 cancelled successfully.
```

7.EXIT:

```
--- Order Management Menu ---
1. Create User
2. Create Product
3. Create Order
4. Cancel Order
5. Get All Products
6. Get Order by User
7. Exit
Enter your choice (1-7): 7
Exiting... Bye!
